

Srihari Gopi

Assistant Vice President, Global Workforce Optimization at Citi
India

gsrihari1993@gmail.com LinkedIn (<https://www.linkedin.com/in/srihari-gopi/>)

Summary

Assistant Vice President at Citi with over ten years in analytics consulting, fintech product management, credit risk modeling and workforce optimization.

At Citi I lead a seven-member automation team and own the data enablement and Xceptor platform initiatives. Before that I worked on lending products, credit risk models and portfolio data, and I studied business analytics at the University of Minnesota's Carlson School.

Experience

Apr 2025 – present

Assistant Vice President, Global Workforce Optimization

Citi

- Lead a seven-member low-code/no-code automation team that I built from scratch. The team runs a multi-API platform handling 600+ transactions a day, so operations agents can request overtime and voluntary time off, log out and update skills themselves.
- Own the data enablement initiatives. I set up a staging layer of 60+ tables that 20+ reports and other analytics solutions use.
- Own the Xceptor platform initiatives: an application-support intake for enquiries and enhancement requests on the GWFO product suite, and the ICRM mitigation-adjustment workflow, which calibrates systemic forecasts with approval across three teams for 100+ capacity plans.
- Built Lineage Console, an AI-assisted tool that maps 10,000 critical data elements from 550+ capacity plans across 4-5 hops. I own its governance and upkeep.
- Prepare a proposal for AI-based anomaly detection and scheduling optimization on Xceptor data exports.
- Was a core member of a Report Rationalization initiative that reviewed clients' reporting landscape and produced a target-state architecture and operating model in six weeks.

Jul 2021 – Dec 2024

Product Manager

Applied Data Finance

- Managed the roadmap and capacity of a 10-member tech team for a personal-loan website.
- Redesigned the organic acquisition funnel for a product originating \$5M a month and introduced VWO for experimentation.
- Integrated lead partners Katapult and MoneyLion; loan volume rose 5%.
- Changed loan-approval workflows, which cut data-provider costs 5%, and moved a core data product (Lexis Nexis) to its latest version, saving \$30,000.
- Set up and expanded a notarization process with a new vendor; fraud fell 10% and turnaround time 30%.
- Rebuilt the acquisition email architecture with a new data schema and tracking; lead volume rose 4%.

Mar 2020 – Jun 2021

Risk Analyst

Funding Circle

- Built a web tool, using an ML model, that routes rejected leads to suitable subprime lender partners.
- Created a single source of truth for a \$1B loan portfolio and standardized metrics for the Credit Risk Management Committee.

2018 – 2020

Associate, Credit Risk Strategy and Modeling

LatentView Analytics

- Apple: built a monitoring framework for 7M daily users of the Stocks app and tracked the launch of French-language news.
- PayPal: rebuilt the credit line increase model with gradient boosting in H2O for a card portfolio of 20M consumers.

2017 – 2018

Analytics Consultant

Carlson Analytics Lab

- Won first place at MinneMUDAC 2017 by predicting high-cost diabetic patients with a random forest, as part of the University of Minnesota graduate analytics practicum.

2014 – 2017

Analyst, then Senior Analyst

LatentView Analytics

- Led five analysts on pricing and FP&A projects for an online-payments client.
- Helped integrate Xoom's pricing with the client's pricing structure, and built a Tableau tool that simulated fee structures for large-merchant negotiations.
- Won the "Spirit of LatentView" award for a customer-engagement waterfall model.

Education

2017 – 2018

MS, Business Analytics

Carlson School of Management, University of Minnesota, Minneapolis, USA

2010 – 2014

B.Tech, Instrumentation and Control Engineering

National Institute of Technology, Trichy, India

- Graduated with First Class. Captained the college swimming team.
- Summer internship at IIT Madras (2013) on data clustering.

Skills

Product and operations: Product management, workforce optimization, capacity planning, report rationalization, process automation, Xceptor workflows

Risk and analytics: Credit risk modeling, gradient boosting (H2O), random forest, causal modeling, scenario planning

Data and engineering: Python, R, SQL (Teradata, MySQL), Django, data mapping and lineage, multi-API integration

Tools: Tableau, Power BI, MicroStrategy, Xceptor, low-code/no-code platforms

Leadership: Team building, stakeholder management, workshop facilitation, cross-functional delivery
